NAME INDEX

A

Adams, M. J. *See* **King, A. A.**
Al-Gifri, M. A. H., and **Bark, L. S.** The enthalpimetric determination of some constituents of dolomite, 359.
Amos, A. J. First Analytical Division Distinguished Service Award conferred on, 1, 58, 79.
Anderson, R. J., and **Gray, A. L.** Application of an atmospheric-pressure ion source to the measurement of isotope ratios at trace levels in solution by mass spectrometry, 284.
Arup, P. S. Obituary, 30.
Attrill, J. B. Obituary, 144, 218.

B

Bacon, J. R. *See* **Ure, A. M.**
Bark, L. S. *See* **Al-Gifri, M. A. H.**
Barker, S. A. Immobilised enzymes as industrial catalysts for production and analysis, 217.
Bartle, K. D., Lee, M. L., and **Novotny, M.** An integrated approach to the analysis of air-pollutant polynuclear aromatic hydrocarbons, 304.
Beadle, B. C. *See* **King, A. A.**
Belcher, R. The elements of organic analysis, 153.
Betteridge, D. New Member of Council, 147.
Bewley, D. K. *See* **Spinks, T. J.**
Bingham, R. A. The analysis of solid materials by laser probe mass spectrometry, 93.
Birch, B. J. *See* **Hart, J. P.**
Bishop, E. Award of 11th Society for Analytical Chemistry Gold Medal to, 1, 57, 79.
British Standards Institution. Revision of British Standards on pH, pH meters and glass electrodes, 320.
Bye, A. Some assay methods used in clinical pharmacology, 88.

C

Caddy, D. E., and **Meek, D. M.** Studies of oils and polycyclic aromatic hydrocarbons in sewage-related systems, 45.
Calam, D. H. Natural and synthetic peptides, 130.
Cantle, J. E. Peak-area measurement of transient signals in atomic-absorption spectrometry, 276.
Castleden, S. L., and **Kirkbright, G. F.** Interferometric atomic line profile measurements of electrodeless discharge lamp sources, 331.
Cernik, A. A. Electroanalysis of toxic metals in blood and urine, 227.
Chalmers, R. A., and **Ramsay, C. G.** Review of "Spectrophotometric Determination of Elements". (Correspondence), 348.
Chowdhry, B. Z. Some recent applications of voltammetry to medicine, 235.
Clark, J. C. Cyclotron production of short-lived isotopes for medical use, 193.
Clements, J. A. Problems with polymorphism of medicinal compounds, 21.
Cluley, H. J. Analysis in the electrical industry, 47.
Corran, P. H. Recent developments in electrophoretic analysis, 18.
Crosby, N. T. Report of symposium on "Recent Trends in Education in Analytical Chemistry", 35.
Crump, G. New Member of Council, 147.

D

David, P. Microprocessors in analytical chemistry, 330.
Davidson, I. E. A polarographic study of some thioamides of pharmaceutical importance, 229.
Dickes, G. J. New Member of Council, 147.
Dickinson, C. H. Survey of portable oxygen monitors, 316.
Duguid, P. *See* **Miller, J. H. McB.**
Dyson, N. A., and **Simpson, A. E.** Measurement of lead and other elements in biological material by proton-induced X-rays, 198.

E

Edmond, J. D. Control of low-level cross-contamination by means of thin-layer chromatography, 28.
Elwell, W. T. New Member of Council, 148.
Evans, E. Automatic sampling and weighing systems for use in the pharmaceutical industry, 310.

F

Fell, G. S., Hough, D. C., Hussein, F. E. R., and **Ottaway, J. M.** Determination of zinc and cadmium in biological samples by atomic-fluorescence spectrometry, 271.
Fleet, B. Report of second Anglo - Czech Symposium on Electrochemistry, 37.
Fremlin, J. H., and **Tanti-Wipawin, W.** Distribution of lead in teeth, 195.
Fuller, C. W. A kinetic theory of atomisation for atomic-absorption spectrometry using a graphite furnace atomiser. Part III. An aid to the selection of atomisation parameters for matrix cotrol, 273.

G

Gamage, C. F. Application of the "SOLFA" on-line analyser to the measurement of total sulphur in petroleum distillates and residual fuels, 307.
Garratt, D. C. Obituary of G. Sykes, 182.
Gilmore, G. R. Activation analysis and archaeometry, 99.
Goodfellow, G. I. Analysis in the electricity supply industry, 296.
Gorrod, J. W. Analytical problems involved in the metabolism of drugs and foreign compounds, 352.
Gray, A. L. *See* **Anderson, R. J.**
Greenfield, S. New Member of Council, 148.
—— Why plasma torches? 279.

H

Harris, J. E. C. *See* **McCormack, J.**
Harrison, M. P. *See* **Warren, J.**
Hart, J. P., Smyth, W. F., and **Birch, B. J.** Polarographic studies of some foreign organic compounds in the aqueous environment, 336.
Herrmann, R. Analytical chemistry in West Germany, 351.
Hislop, J. S. *See* **Williams, D. R.**
Hough, D. C. *See* **Fell, G. S.**
Hussein, F. E. R. *See* **Fell, G. S.**

J

Jaber, A. M. Y., Moody, G. J., and **Thomas, J. D. R.** Cation adducts of non-ionic surfactants as ion-selective electrode sensors, 328.

Jackson, H. M. Analysis of hazardous industrial atmospheres, 343.
John, P., and **Soutar, I.** Identification of crude oils by luminescence techniques, 309.
Johnson, C. A. Recent advances in pharmaceutical analysis—do we really need them? 6.
Jurand, J. *See* **Knox, J. H.**

K

Kaiser, H. Obituary, 320.
Keattch, C. J. Translation of "Elements of Experimental Chemistry". (Correspondence), 142.
Keeley, R. H. Some applications of electron probe instruments in forensic science, 178.
Khera, A. K., and **Wibberley, D. G.** Some analytical problems concerning trace-metal analysis in human placentae, 340.
King, A. A., Adams, M. J., Beadle, B. C., and **Kirkbright, G. F.** Some studies in optoacoustic spectroscopy, 326.
Kirkbright, G. F. *See* **Castleden, S. L.; King, A. A.**
Knox, J. H., Jurand, J., and **Pryde, A.** Recent applications of high-performance liquid chromatography in pharmaceutical analysis, 14.

L

Lee, M. L. *See* **Bartle, K. D.**
Lightbown, J. W. Tetracyclines, 137.
Littlejohn, D. *See* **Shaw, F.**
Lowden, G. F. Organic carbon and oxygen demand analyses and their relationships in waste waters and effluents, 44.

M

McCormack, J., Harris, J. E. C., and **Scullion, H. J.** Single-particle characterisation by optical microscopy and associated techniques, 344.
McMillan, J. W., and **Pierce, T. B.** Stable isotope tracer measurements using accelerators, 209.
Mansfield, J. R. Personal and lightweight flammable gas monitors, 108.
Massmann, H. State of development of atomic-absorption and atomic-fluorescence spectrometry with furnaces, 258.
Meek, D. M. *See* **Caddy, D. E.**
Miller, J. H. McB., and **Duguid, P.** The fluorimetric analysis of oestrogen in oral contraceptive preparations, 9.
Milner, G. W. C. The changing scene in analytical chemistry, 81.
Moffat, A. C. Gas-liquid chromatographic methods for the analysis of drugs and their metabolites, 355.
Moody, G. J. *See* **Jaber, A. M. Y.**
Murfin, J. W. Automation in the analysis of drugs, 8.
Musty, J. Analysis and archaeology—Plenary lecture, 94.

N

Nicholson, J. A review of applications of derivative formation in the quantitative gas-chromatographic analysis of pharmaceuticals, 16.
Nickless, G. *See* **Webster, R. D. J.**
Novotny, M. *See* **Bartle, K. D.**
Nursten, H. E. Identification of the important contributors to the aroma of foods, 214.

O

Osibanjo, O. Presentation of Elwell Award to, 80.
—— Molecular emission cavity analysis of some phosphorus compounds, 127.
Ottaway, J. M. Atom formation and interferences in flame and carbon furnace atomic spectrometry, 185.
—— *See also* **Fell, G. S.; Shaw, F.**

SUBJECT INDEX

A

Air: An integrated approach to the analysis of —— -pollutant polynuclear aromatic hydrocarbons. Bartle, Lee and Novotny, 304.
Analysis of hazardous industrial atmospheres. Jackson, 343.
Alkanesulphonates: Polarographic studies of some foreign organic compounds in the aqueous environment. Hart, Smyth and Birch, 336.
Alkylbenzenesulphonates: Polarographic studies of some foreign organic compounds in the aqueous environment. Hart, Smyth and Birch, 336.
Analytical chemistry: Analysis and archaeology. Musty, 94.
in Japan. Saito, 60.
in Japan. Translation of "Elements of Experimental Chemistry". Keattch. (Correspondence), 142.
in West Germany. Herrmann, 351.
Report of symposium on "Recent Trends in Education in ——". Crosby, 35.
The changing scene in ——. Milner, 81.
Analytical Division: Analytical Chemistry Trust Fund, 31.
4th A.G.M., 79.
Atomic Spectroscopy Group. 11th A.G.M., 39.
Automatic Methods Group. 10th A.G.M., 38.
Biological Methods Group. 31st A.G.M., 38.
Chromatography and Electrophoresis Group. 11th A.G.M., 4.
Distinguished Service Award conferred on A. J. Amos, 1, 58, 79.
Education and Training Group. 5th A.G.M., 39.
Electroanalytical Group. 6th A.G.M., 38.
Joint Pharmaceutical Analysis Group. A.G.M., 118.
Microchemical Methods Group. 32nd A.G.M., 37.
Midlands Region. 21st A.G.M., 4.
Midlands Region. Elwell Award Presentation Meeting, 80.
New Members of Council, 147.
New President, 81.
North East Region. 10th A.G.M., 80.
North West Region. 51st A.G.M., 80.
Particle Size Analysis Group. 10th A.G.M., 4.
Radiochemical Methods Group. 9th A.G.M., 5.
Rank Hilger Spectroscopy Prize, 39.
Report of symposium on "Recent Trends in Education in Analytical Chemistry". Crosby, 35.
Scottish Region. 41st A.G.M., 3.
Special Techniques Group. 31st A.G.M., 37.
5th Theophilus Redwood Lecture, 153.
Thermal Methods Group. 11th A.G.M., 5.
Western Region. 21st A.G.M., 80.
Ascorbic acid: Application of flame and flameless atomic absorption spectroscopy to routine rock analysis and a study of some matrix interference effects in flameless atomic-absorption spectroscopy. Warren and Harrison, 287.
Automation in the analysis of drugs. Murfin, 8.

B

Beer: Studies on flavour-active sulphur components of hops and ——. Pickett, 215.
Biological fluids: Application of high performance liquid chromatography to drug metabolism. Skellern, 357.
Use of thin layer chromatography in the quantitative analysis of drugs and metabolites in body fluids. Stopher, 354.
Biological materials: Determination of zinc and cadmium in biological samples by atomic-fluorescence spectrometry. Fell, Hough, Hussein and Ottaway, 271.
Measurement of lead and other elements in —— by proton-induced X-rays. Dyson and Simpson, 198.
Biological tissues: Some analytical problems concerning trace-metal analysis in human placentae. Khera and Wibberley, 340.
Blood: Characterisation of proteins in ——. Parkin, 175.
Electroanalysis of toxic metals in —— and urine. Cernik, 227.
Blood plasma: Use of thin-layer chromatography in the quantitative analysis of drugs and metabolites in body fluids. Stopher, 354.
Body: Activation analysis *in vivo* of the human —— using cyclotron-produced neutrons. Spinks and Bewley, 204.
Feasibility of the measurement of whole- —— nitrogen by collection of exhaled $^{11}CO_2$ and ^{11}CO. Thomas, Wright, Ozbas and Vartsky, 207.
Bone ash: Determination of copper and zinc in —— using accelerator-produced γ-photons. Williams and Hislop, 202.

C

Cadmium: Determination of zinc and —— in biological samples by atomic-fluorescence spectrometry. Fell, Hough, Hussein and Ottaway, 271.
Calciferol: Chemical analysis of vitamins A, D and E. Wiggins, 133.
Carbon: Feasibility of the measurement of whole-body nitrogen by collection of exhaled $^{11}CO_2$ and ^{11}CO. Thomas, Wright, Ozbas and Vartsky, 207.
Organic —— and oxygen demand analyses and their relationships in waste waters and effluents. Lowden, 44.
Catalysts: Immobilised enzymes as industrial —— for production and analysis. Barker, 217.
Chemical Society: Additions to Library, 315.
Annual Congress, 1976, 117.
1975 Award for Chemical Analysis and Instrumentation awarded to T. S. West, 351.
Cholecalciferol: Chemical analysis of vitamins A, D and E. Wiggins, 133.
Chromatography: A review of applications of derivative formation in the quantitative gas-chromatographic analysis of pharmaceuticals. Nicholson, 16.
Application of high-performance liquid —— to drug metabolism. Skellern, 357.
Control of low-level cross-contamination by means of thin-layer ——. Edmond, 28.
Forensic applications of liquid ——. Wheals, 164.

Chromatography—*cont.*
Gas - liquid chromatographic methods for the analysis of drugs and their metabolites. Moffat, 355.
Recent applications of high-performance liquid —— in pharmaceutical analysis. Knox, Jurand and Pryde, 14.
Selective detectors in gas ——. Taylor, 168.
Use of thin-layer —— in the quantitative analysis of drugs and metabolites in body fluids. Stopher, 354.
Coal: Progress in analysis in the solid fuel industry. Wilkinson, 300.
Computers: Microprocessors in analytical chemistry, David, 330.
Contamination: Control of low-level cross- —— by means of thin-layer chromatography. Edmond, 28.
Contraceptive preparations: The fluorimetric analysis of oestrogen in oral ——. Miller and Duguid, 9.
Copper: Determination of —— and zinc in bone ash using accelerator-produced γ-photons. Williams and Hislop, 202.
Correspondence: 142, 348.
Cosmetics: Proposed legislation, 150.

D

Distinguished Service Award: Conferred on A. J. Amos, 1, 58, 79.
Dolomite: The enthalpimetric determination of some constituents of ——. Al-Gifri and Bark, 359.
Drug(s): Analytical problems involved in the metabolism of —— and foreign compounds. Gorrod, 352.
Application of high-performance liquid chromatography to —— metabolism. Skellern, 357.
Automation in the analysis of ——. Murfin, 8.
Gas - liquid chromatographic methods for the analysis of drugs and their metabolites. Moffat, 355.
Use of thin-layer chromatography in the quantitative analysis of —— and metabolites in body fluids. Stopher, 354.

E

Education: Report of symposium on "Recent Trends in —— in Analytical Chemistry". Crosby, 35.
Effluent(s): Organic carbon and oxygen demand analyses and their relationships in waste waters and ——. Lowden, 44.
Standards for water and —— quality: analytical implications and problems. Wilson, 246.
Studies of oils and polycyclic aromatic hydrocarbons in sewage-related systems. Caddy and Meek, 45.
Electrical industry: Analysis in the ——. Cluley, 47.
Electricity supply: Analysis in the —— industry. Goodfellow, 296.
Electrochemistry: Electroanalysis of toxic metals in blood and urine. Cernik, 227.
Report of second Anglo - Czech Symposium on ——. Fleet, 37.
Electrode(s): Cation adducts of non-ionic surfactants as ion-selective —— sensors. Jaber, Moody and Thomas, 328.
Revision of British Standards on pH, pH meters and glass ——. British Standards Institution, 320.
Electron probe instruments: Some applications of —— in forensic science. Keeley, 178.
Electrophoresis: Recent developments in electrophoretic analysis. Corran, 18.
Elements: Review of "Spectrophotometric Determination of ——". Chalmers and Ramsay. (Correspondence), 348.
Enthalpimetry: The enthalpimetric determination of some constituents of dolomite. Al-Gifri and Bark, 359.
Environment: Legal requirements for analysis of the ——. Swinburn, 344.
Enzymes: Analytical applications of some unusual molecules. Townshend, 64.
Immobilised —— as industrial catalysts for production and analysis. Barker, 217.
Equipment news: 49, 69, 139, 219, 250, 312, 361.
Euroanalysis III Conference. Announcement, 292.

F

Foods: Identification of the important contributors to the aroma of ——. Nursten, 214.
Forensic analysis: Forensic applications of liquid chromatography. Wheals, 164.
Some applications of electron probe instruments in forensic science. Keeley, 178.
Fuel(s): Application of the "SOLFA" on-line analyser to the measurement of total sulphur in petroleum distillates and residual ——. Gamage, 307.
Progress in analysis in the solid —— industry. Wilkinson, 300.
Furnace(s): Carbon —— atomic-emission spectrometry. Shaw, Ottaway and Littlejohn, 264.
State of development of atomic-absorption and atomic-fluorescence spectrometry with ——. Massmann, 258.

G

Gallium: Application of flame and flameless atomic-absorption spectroscopy to routine rock analysis and a study of some matrix interference effects in flameless atomic-absorption spectroscopy. Warren and Harrison, 287.
Gas detectors: Personal and lightweight flammable gas monitors. Mansfield, 108.
Gold Medal: Awarded to E. Bishop, 1, 57, 79.

H

Hafnium: Analytical applications of some unusual molecules. Townshend, 64.
Hazards: Analysis of hazardous industrial atmospheres. Jackson, 343.
Threshold limit values in the occupational hygiene field. Silk, 244.
Hops: Studies on flavour-active sulphur components of —— and beer. Pickett, 215.
Hydrocarbons: An integrated approach to the analysis of air-pollutant polynuclear aromatic ——. Bartle, Lee and Novotny, 304.
Identification and measurement of —— and their derivatives in waters. Whitby, 247.
Studies of oils and polycyclic aromatic —— in sewage-related systems. Caddy and Meek, 45.

I

Industry: Analysis in the electrical ——. Cluley, 47.
Analysis in the electricity supply ——. Goodfellow, 296.
Analysis in the petroleum ——. Quayle, 302.
Analytical developments in the nuclear ——. Sinclair, 295.
Progress in analysis in the solid fuel ——. Wilkinson, 300.

Isotope(s): Application of an atmospheric-pressure ion source to the measurement of —— ratios at trace levels in solution by mass spectrometry. Anderson and Gray, 284.
Cyclotron production of short-lived —— for medical use. Clark, 193.
Stable —— tracer measurements using accelerators. McMillan and Pierce, 209.

K

Kinetic theory: A —— of atomisation for atomic-absorption spectrometry using a graphite furnace atomiser. Part III. An aid to the selection of atomisation parameters for matrix control. Fuller, 273.

L

Lamp: Interferometric atomic line profile measurements of electrodeless discharge —— sources. Castleden and Kirkbright, 331.
Laser(s): Pulsed —— techniques and their applications, Reid, 91.
The analysis of solid materials by —— probe mass spectrometry. Bingham, 93.
Their current and potential applications in analytical chemistry. Sharp, 104.
Lead: Distribution of —— in teeth. Fremlin and Tanti-Wipawin, 195.
Measurement of —— and other elements in biological material by proton-induced X-rays. Dyson and Simpson, 198.
Legislation: Legal limits in consumer protection. Shenton, 241.
Legal requirements for analysis of the environment. Swinburn, 344.
Proposed ——. Outline of Draft Directive for Cosmetics, 150.
The consultative process, Sawyer, 238.
Theshold limit values in the occupational hygiene field. Silk, 244.

M

Mass spectrometry: Application of an atmospheric-pressure ion source to the measurement of isotope ratios at trace levels in solution by ——. Anderson and Gray, 284.
The analysis of solid materials by laser probe ——. Bingham, 93.
Metal(s): Analysis of hazardous industrial atmospheres. Jackson, 343.
Electroanalysis of toxic —— in blood and urine. Cernik, 227.
Some analytical problems concerning trace- —— analysis in human placentae. Khera and Wibberley, 340.
Microanalysis: Some applications of electron probe instruments in forensic science. Keeley, 178.
Microprocessors in analytical chemistry. David, 330.
Microscopy: Single-particle characterisation by optical —— and associated techniques, McCormack, Harris and Scullion, 344.
Mineral oils: Studies of oils and polycyclic aromatic hydrocarbons in sewage-related systems. Caddy and Meek, 45.
Minerals: The enthalpimetric determination of some constituents of dolomite. Al-Gifri and Bark, 359.
Molecular complexes: Analytical applications of some unusual molecules. Townshend, 64.
Molecular emission cavity analysis: Analytical applications of some unusual molecules. Townshend, 64.
of some phosphorus compounds. Osibanjo, 127.
Monitors: Personal and lightweight flammable gas ——. Mansfield, 108.
Survey of portable oxygen ——. Dickinson, 316.

N

Neutron activation analysis: Activation analysis and archaeometry. Gilmore, 99.
Activation analysis *in vivo* of the human body using cyclotron-produced neutrons. Spinks and Bewley, 204.
Nitrogen: Feasibility of the measurement of whole-body —— by collection of exhaled $^{11}CO_2$ and ^{11}CO. Thomas, Wright, Ozbas and Vartsky, 207.
Nuclear energy: Analytical developments in the nuclear industry. Sinclair, 295.

O

Obituaries: 30, 144, 182, 218, 320.
Odours: Identification of the important contributors to the aroma of foods. Nursten, 214.
Oestrogen: The fluorimetric analysis of —— in oral contraceptive preparations. Miller and Duguid, 9.
Organic analysis: The elements of ——. Belcher, 153.
Organic compounds: Polarographic studies of some foreign —— in the aqueous environment. Hart, Smyth and Birch, 336.
Polarography in the study of the metabolism of foreign ——. Smyth and Smyth, 223.
Oxygen: Organic carbon and —— demand analyses and their relationships in waste waters and effluents. Lowden, 44.
Survey of portable —— monitors. Dickinson, 316.

P

Packaging materials: Quality control of plastics used in pharmaceutical packaging. Pentelow, 25.
Particle(s): Single- —— characterisation by optical microscopy and associated techniques. McCormack, Harris and Scullion, 344.
Peptides: Natural and synthetic ——. Calam, 130.
Periodate: Analytical applications of some unusual molecules. Townshend, 64.
Pesticides: Electroanalysis of agrochemicals in crop residues and formulations. Rowe, 232.
Petroleum: Analysis in the —— industry. Quayle, 302.
Application of the "SOLFA" on-line analyser to the measurement of total sulphur in —— distillates and residual fuels. Gamage, 307.
Identification of crude oils by luminescence techniques. John and Soutar, 309.
pH: Revision of British Standards on ——, —— meters and glass electrodes. British Standards Institution, 320.
Pharmaceutical analysis: A review of applications of derivative formation in the quantitative gas-chromatographic analysis of pharmaceuticals. Nicholson, 16.
Automation in the analysis of drugs. Murfin, 8.
Control of low-level cross-contamination by means of thin-layer chromatography. Edmond, 28.
Problems with polymorphism of medicinal compounds. Clements, 21.
Recent advances in —— : do we really need them? Johnson, 6.

Pharmaceutical analysis—*cont.*
Recent applications of high-performance liquid chromatography in ——. Knox, Jurand and Pryde, 14.
Some assay methods used in clinical pharmacology. Bye, 88.
Pharmaceutical industry: Automatic sampling and weighing systems for use in the ——. Evans, 310.
Pharmacology: Some assay methods used in clinical ——. Bye, 88.
Phosphorus: Molecular emission cavity analysis of some —— compounds. Osibanjo, 127.
γ-Photons: Determination of copper and zinc in bone ash using accelerator-produced ——. Williams and Hislop, 202.
Phthalate esters: Problems in the environmental analysis of ——. Webster and Nickless, 333.
Placentae: Some analytical problems concerning trace-metal analysis in human ——. Khera and Wibberley, 340.
Plasticisers: Problems in the environmental analysis of phthalate esters. Webster and Nickless, 333.
Plastics: Quality control of —— used in pharmaceutical packaging. Pentelow, 25.
Polarography: A polarographic study of some thioamides of pharmaceutical importance. Davidson, 229.
Electroanalysis of agrochemicals in crop residues and formulations. Rowe, 232.
Electroanalysis of toxic metals in blood and urine. Cernik, 227.
in the study of the metabolism of foreign organic compounds. Smyth and Smyth, 223.
Polarographic studies of some foreign organic compounds in the aqueous environment. Hart, Smyth and Birch, 336.
Polymorphism: Problems with —— of medicinal compounds. Clements, 21.
Proteins: Characterisation of —— in blood. Parkin, 175.
Publications received: 32, 53, 74, 113, 143, 183, 222, 254, 321, 349, 365.

R

Radiochemical analysis: Report of Third International Liquid Scintillation Counting Symposium, 1.
Rare-earth elements: Determination of rare earths by neutron-activation analysis. Whitley, 120.
Determination of rare earths in rocks and soils by spark-source mass spectrometry. Ure and Bacon, 124.
Determination of —— by mass-spectrometric isotope dilution. Pankhurst, 122.
in chondrites as normalising factors in geochemistry. Potts, 118.
Retinol: Chemical analysis of vitamins A, D and E. Wiggins, 133.
Rock(s): Application of flame and flameless atomic-absorption spectroscopy to routine —— analysis: and a study of some matrix interference effects in flameless atomic-absorption spectroscopy. Warren and Harrison, 287.
Determination of rare earths in —— and soils by spark-source mass spectrometry. Ure and Bacon, 124.
Determination of rare-earth elements by mass-spectrometric isotope dilution. Pankhurst, 122.
Rare-earth elements in chondrites as normalising factors in geochemistry. Potts, 118.

S

Sampling: Automatic —— and weighing systems for use in the pharmaceutical industry. Evans, 310.
Scintillation counting, liquid: Report of Third International Symposium, Bath, 1975, 1.
Sewage: Studies of oils and polycyclic aromatic hydrocarbons in —— -related systems. Caddy and Meek, 45.
Society for Analytical Chemistry: Award of Gold Medal to E. Bishop, 1, 57, 79.
Fourth SAC Conference. Birmingham, 1977. Announcements, 292, 349.
Soil: Determination of rare earths in rocks and —— by spark-source mass spectrometry. Ure and Bacon, 124.
Spectrometer: A general-purpose atomic —— for the analysis of solutions and solids by absorption, fluorescence or emission spectroscopy. Walsh, 325.
Spectrometry: A kinetic theory of atomisation for atomic-absorption —— using graphite furnace atomiser. Part III. An aid to the selection of atomisation parameters for matrix control. Fuller, 273.
Atom formation and interferences in flame and carbon furnace atomic ——. Ottaway, 185.
Carbon furnace atomic-emission ——. Shaw, Ottaway and Littlejohn, 264.
Determination of zinc and cadmium in biological samples by atomic-fluorescence ——. Fell, Hough, Hussein and Ottaway, 271.
Interferometric atomic line profile measurements of electrodeless discharge lamp sources. Castleden and Kirkbright, 331.
Peak-area measurement of transient signals in atomic-absorption ——. Cantle, 276.
State of development of atomic-absorption and atomic-fluorescence —— with furnaces. Massmann, 258.
Why plasma torches? Greenfield, 279.
Spectroscopy: Application of flame and flameless atomic-absorption —— to routine rock analysis and a study of some matrix interference effects in flameless atomic-absorption ——. Warren and Harrison, 287.
Derivative ——. Stäudner, 212.
Excitation sources for atomic ——. Sharp, 40.
Practical developments in atomic-fluorescence ——. West, 266.
Spectroscopy, optoacoustic: Some studies in ——. King, Adams, Beadle and Kirkbright, 326.
Standards for water and effluent quality: analytical implications and problems. Wilson, 246.
Steel(s): Monitoring residual elements in —— by atomic-absorption spectroscopy. Taylor, 342.
Sulphur: Application of the "SOLFA" on-line analyser to the measurement of total —— in petroleum distillates and residual fuels. Gamage, 307.
Studies on flavour-active —— components of hops and beer. Pickett, 215.
Surfactants: Cation adducts of non-ionic —— as ion-selective electrode sensors. Jaber, Moody and Thomas, 328.

T

Teeth: Distribution of lead in ——. Fremlin and Tanti-Wipawin, 195.
Tetracyclines: Lightbown, J. W., 137.
The Analyst: Centenary of ——. 59, 112.
New Regional Advisory Editor, 257.

Thioamides: A polarographic study of some —— of pharmaceutical importance. Davidson, 229.
Titrator: Microprocessors in analytical chemistry. David, 330.
Tocopherol: Chemical analysis of vitamins A, D and E. Wiggins, 133.
Toxic substances: Threshold limit values in the occupational hygiene field. Silk, 244.
Tracer(s): Stable isotope —— measurements using accelerators. McMillan and Pierce, 209.

U

Urine: Electroanalysis of toxic metals in blood and ——. Cernik, 227.
Use of thin-layer chromatography in the quantitative analysis of drugs and metabolites in body fluids. Stopher, 354.

V

Vitamins: Chemical analysis of —— A, D and E. Wiggins, 133.
Voltammetry: Some recent applications of —— to medicine. Chowdhry, 235.

W

Water(s): Identification and measurement of hydrocarbons and their derivatives in ——. Whitby, 247.
Water(s)—*cont.*
Organic carbon and oxygen demand analyses and their relationships in waste —— and effluents. Lowden, 44.
Polarographic studies of some foreign organic compounds in the aqueous environment. Hart, Smyth and Birch, 336.
Standards for —— and effluent quality: analytical implications and problems. Wilson, 246.
Weighing: Automatic sampling and —— systems for use in the pharmaceutical industry. Evans, 310.

X

X-ray fluorescence: Application of the "SOLFA" on-line analyser to the measurement of total sulphur in petroleum distillates and residual fuels. Gamage, 307.
X-rays: Measurement of lead and other elements in biological material by proton-induced ——. Dyson and Simpson, 198.

Z

Zinc: Determination of copper and —— in bone ash using accelerator-produced γ-photons. Williams and Hislop, 202.
Determination of —— and cadmium in biological samples by atomic-fluorescence spectrometry. Fell, Hough, Hussein and Ottaway, 271.
